NO. 721 September 2009 PO BOX 1628 WELLINGTON

Expedition to the Antarctic 1959-60 by Brian McGlinchy

Club nights are at Turnbull House, on the first unimpeded Monday of every month. New and prospective members are welcome. Meetings and talks start at 8.00 pm with club business and tea & coffee afterwards. Meet for dinner at the Backbencher public bar at 6.30 pm and on to Turnbull House at 7.30 pm for a catch up.

Next section night: 7 September 2009

Expedition to the Antarctic 1959-60 by Brian McGlinchy

Brian was a member of the expedition to the Antarctic in 1959-60. This year is the 50th anniversary of the trip. Seven of the eight members of the expedition are still living and they will be holding a reunion in Christchurch in November this year. Brian is still a member of the the Section and is coming along to reminisce about the expedition.

Prior to the talk we will hold the AGM of the Section which should take about 30 - 45 minutes.

Notice of AGM

At the 7 September club night we will first be holding the 2009 AGM for the Wellington Section. This is a most important meeting in our annual calendar and we encourage all members to attend. Of most interest will be the Election of Officers. We will be looking to replenish the committee with a fresh batch of keen bods and new ideas.

All nominations for committee positions should be sent to The Secretary at secretary@nzalpine.wellington.net.nz or alternatively nominations will be taken from the floor. For more details of this meeting (including the agenda) please refer to the Notice of AGM 2009 at <http://www.nzalpine.wellington.net.nz/?p=1842>

Stephen Venables Speaking in Wellington

It's not often a mountaineer of Stephen's calibre, both in climbing and in public speaking, visits New Zealand. Take the opportunity to hear him speak on his "Himalayan Odyssey" in Wellington at 7:30pm on 1st September, 2009.

Venue: Lecture Theatre 101, MacLaurin Building, Kelburn Campus, Victoria University

Tickets: \$15 retail / \$12 NZAC members, available from from Bivouac Wellington, or at the door (email sm@nzalpine.wellington.net.nz for further information)

Stephen Venables, British mountaineer, author and public speaker, is one of the most successful climbers of his generation.

The first Brit to summit Everest without supplementary oxygen, he began his mountaineering career in the European Alps in the mid sixties. Keen to explore further afield, he made a pioneering expedition to the Afghan Hindu Kush in 1977, which was to set the tone for his explorative Himalayan climbing over the next three decades.

Stephen's first ascents in the Greater Ranges include extreme new routes on Kishtwar Shivling and Panchuli V (India), and Kusum Kangru (Nepal), and he has enjoyed climbing with many of the worlds best exploratory mountaineers, including Chris Bonnington, Reinhold Messner and Harish Kapadia. His historic climb of Everest involved reaching the summit alone via a new route on the huge Kangshung Face, then bivouacking in the open at 8,600m and suffering frostbite on descent.

He has authored eleven books, including 'Painted Mountain' which won the Boardman Tasker Prize for Mountain Literature in 1985, and 'Himalayan Alpine Style,' considered by many climbers to be the 'bible' of bold Himalayan climbing.

SECTION TRIP NEWS

Please send your trip reports to newsletter@nzalpine.wellington.net.nz, so everyone can enjoy your stories.

Mt Cupola

The trip began with 7 of us meeting on Friday, May 29th 2009 amongst a conglomeration of Inter-Island ferry passengers all bound for Picton. Our destination was a little further afield, the goal was the lofty summit of Mt Tapuae-o-Uenuku and at 2885metres, the highest peak north of Mt Cook National Park.

The weather forecast for the region was ominous, however, prophesizing impending doom with a Southerly storm front due for the weekend, the worst of it forecast to hit summit day. After a couple of Ale's, or for the refined a little "wine" a discussion took place along with a vote, which due to the inclement weather forecast changed our goal from Mt Tapuae-o-Uenuku to Mt Cupola, in Nelson lakes National Park; somewhat lower at 2260 meters but a far safer option weather wise.

Once in Picton two cars were hired and an uneventful trip had us @ Nelson lakes NP around Midnight. Tents were erected, beds rolled out and some Zz's were caught before....what's this? A loudspeaker and the stomp stomp stomp of pounding feet @ 4am in the morning. We had parked ourselves up in the middle of a multisport endurance event centre and start area!

6am. The alarm goes off and we climb wearily from our pits to get our gear together, cheat a little by scoring a water taxi ride across the lake and be away before the crowds take our bunks @ Cupola basin hut. Or so we thought, it was after 10am before we all departed Cold Water hut @ the head of the lake for our destination.

Calm lightly overcast weather conditions graced our journey up the Travers valley to John Tait hut, as the day progressed the cloud thickened a little but showed no sign of deteriorating and made some of us at least think that perhaps a mistake had been made and we should have made those 60 plus river crossings of the Hodder in pursuit of Tapi!

A brief late lunch (3.10pm) was had at John Tait hut before continuing up valley to Cupola Basin. Most had ditched their plastic boots in favour of leather and had used these for the walk up valley intent on using these same boots for the climb the following day. One sucker (the Author) chose to wear his running shoes for the walk in to save his precious new boots for the climb to the summit. By the time the real climb of the day was taking place in the last hour up to the hut he was beginning to regret this decision. Constantly slipping on snow, poor support around the ankles and the up river journey with full pack had crushed these \$50 Warehouse wonders to pulp and left the wearer wondering if he would make the last few meters to the hut alive. Kate the machine had left me for dead halfway up the hill, Hinrich and Julie passed me by seemingly untroubled by the gradient or their loads and Jane, Loraine and Rob weren't far behind. After 7 hours on the go we had all arrived at our destination- an empty Cupola basin hut ☺.

Rob and I had elected to leave our tent back at the road end -our decision to shed a few kg's weight from our packs had paid off!

Mutterings amongst some of an "Alpine start" were quickly quashed in favour of a more civilised 6am rise time the following morning, dinner was had and off to sleep we all went. There was very little to no snoring in the hut that night and the call of nature delivered @ 4am revealed a starry sky. It was going to be a magnificent day to climb a mountain!!

Wrong... At 5am I heard what I thought was hail on the roof and with it a huge wind gust. Our 6am rise revealed thick mist but no rain or snow. By the time we departed at 7.35am the weather had deteriorated further and light snow was falling. As we marched upward things didn't seem too bad, our crampons went on at about 1600meters and being in the basins on the north side of the mountain we didn't really notice the gathering wind.

Our route involved some rock scrambling up a buttress via a ledge system and rock ridge, fresh snow topped the rocks and overlay the older snow in the gullies. At least the white stuff was freezing into place what seemed like very rotten rock. I wasn't looking forward to down climbing this apparently grade 1+ route.

Traversing the upper basins on the mountain was a joy and for a while it seemed that we might even climb out of the inclement weather, with the odd cloud break and sun almost with us. The illusion didn't last and the weather really started closing in, luckily thanks to Rob's Altimeter I was informed that the top of the mountain was scarcely 100 vertical meters higher. Rob and Kate did a reconnaissance of another route off the mountain whilst the rest of us proceeded toward the Summit.

On the Summit the wind really hit hard and to make matters worst, it was to chase us all the way back down to the hut 900 meters below.

Summit (R Hawes)

A quick series of photos were taken and once Rob and Kate had rejoined us a group "summit hug" took place before we departed, tails between our legs and us all

beginning to freeze up. We retraced our snow covered, barely existent steps to the top of the buttress described earlier and then deviated down a gully system that Kate and Rob had partially explored earlier. This was where some discussion took place as to the how exactly we were going to down climb this relatively steep gully system with only one tool each. Several of us went ahead, other's waited – Rob was going to return with extra tools for those who desired them once we had reached the bottom of the gully.

Hinrich and Kate on the descent (D Persson)

It was cold, damn freezing. The wind chill was up, my flash Gore-Tex jacket had frozen solid white inside. Others were beginning to get colder as well, we were awaiting the last members of our party to emerge from the gully. I moved downhill and chopped a large platform with my ice axe to warm up. Above I could see the two remaining members of our party emerge from the murk of the snowstorm taking place around us. Suddenly one of them dropped and tore down the slope at a terrific rate, he self arrests and rises beside the majority of our team now a solid white colour. It's Hinrich displaying his considerable talent at bum sliding on new snow! Jane elects to follow suit and is soon with the rest of us. Ahead I see snow mini tornadoes race up and down the slopes of the Mountain. I'm glad, very soon we'll all be out of this weather and be warm and dry back at the hut.

We arrive back @ 3.15pm, a team of WTMC people has been up to the hut for lunch on a day trip from John Tait but have left by the time we are back. Not expecting to see anyone else we all spread out and enjoyed the exhilaration of having summited the Mountain. At 5pm an unexpected guest arrives shattered from his walk in from St Arnaud, space is made and a hot drink offered but declined, he climbs into his sleeping bag and is not seen again until the following morning.

Wanting to be dry and warm I am joined by Rob in collecting firewood from the frozen wonderland outside the hut. A surprising amount is gathered, split and stacked next to the wood burner. The ensuing fire burns long into the night, so warm is it that some people on the top bunks don't get to sleep lying on top of their sleeping bags until after 1am.

It's now 5.30am and we are again up, preparing to charge down the mountain and back to our cars for the pilgrimage back to the City. I for one don't want to leave this place. It's dark outside - Jupiter, Venus and innumerable stars are visible stretching across the velvet sky. The wind has ceased, spent with the storm that passed through the yesterday. The ground crunches beneath our feet as we walk out the door @ 7am, as we descend the snow slowly releases its grip on the landscape and is replaced by frost that follows us down valley all the way to the lake.

Despite the sun shining there is still a chill in the air, even as we have lunch awaiting the arrival of the water taxi.

Lorraine and Jane go "hut bagging" in favour of lunch and cross the Travers river to record their visit in the lake head hut log book, they arrive back soaked but happy. Later, on the ferry we learn that we are the only party of a number in the area that weekend to summit a peak. I learn even later that we are now deemed "tough bastards" by some in the tramping/mountaineering community beaten back by the weather in various parts of the park that weekend. To them I say that if I'd been alone I would not have done it, as a team we could and did. We had an extremely competent leader and several very experienced team members, without them none of this would have been possible.

Personally, I reflect on the weekend that has been, of new friends made and of new places explored. I thank you all and look forward to climbing with you again in the future.

Leaving (D Persson)

Party: Hinrich Schaefer, Julie Deslippe, Kate Sinclair, Robert Hawes, Lorraine Johns, Jane Dudley, Dave Persson.

Report by Dave Persson

Cathedral Rocks

It's quiet now, as the last of the days light fades across the crater plateau. I carefully step through the notch and gaze at the slopes stretching far below now empty of the maddening crowds. I glance back briefly and observe Graham half a kilometre behind doing the final adjustments to his touring ski's. He will be past me soon.

I proceed down the slopes, my crampons biting into the hardening snow as the last warmth of the day slips away. Far in the distance a black puff of smoke rises, followed a few seconds later by the faint roar of an engine as the first of the snowploughs begins its nightly patrol.

A few hours earlier we had been penduluming madly 70m up the Corner Route of Cathedral Rocks in the Crater, one of the hardest recognised routes of waterfall ice on Ruapehu (WI4). Connecting the various discontinuous ice lines together. Crying out intermittently calls of "Slack on Blue", "Tight", "Take in Hard" as we traversed blank rock faces and sought purchase on thin smears of brittle ice stuck to the rock beneath. We alternated leads as a 2 man team – pitch/belay/pitch/belay – emerging 3 hours and 4 pitches later on the snow slopes above the face. The focus, the movement, filled the mind – there was no room for anything else – no mortgage, no work worries, nothing but the next move.

And then the alpine hut afterwards, and a bottle of red with friends, as we talk about our day and plans for the future. What a way to cap off a day in the mountains – Awesome.

Climbers: Graham Johnson and Kevin Patterson.

Paretetaitonga, Dome, Cathedral Rocks, Te Heu Heu (South Face)

I had signed up for this trip with the Wellington section several months before. At the moment I'm flitting between cities (and sections of the New Zealand Alpine Club) like a butterfly. However, Ruapehu is conveniently situated between Wellington and Auckland, making it easy for me to settle on.

Friday

I was the advance party. I got down to Ruapehu first (I wasn't working that Friday). I made a voyage up to the hut via the poled route. It was perfectly clear, with barely any wind. As I climbed up Delta ridge towards the hut I could see more and more stars over head. Rounding the final snow cap I saw the hut, and was happy to see it lit up (other people were there!). The other two hut occupants were off to attempt to climb up Tahurangi the next day. We had dinner and eventually went to bed at 9ish, thinking that the others would arrive at around 11ish.

Saturday

I woke the next morning to a hut that was bustling with people and new faces. I met our trip leader (Robert Hawes) and we got packed, ready for the walk up to Paretetaitonga, the 2nd highest peak on Ruapehu at 2751m. We decided to climb up the east ridge of Pare. From the top, we had magnificent views across the crater lake and the surrounding country side. The crater lake below was looking pretty volcanic; gun metal grey, with steam rising from it and a dark streaky curl snaking through it. The whole area was utterly stunning, and we had clear views all around. We descended back down onto the summit area, and decided to take off to Dome shelter for a spot of lunch. After lunch we descended down onto the summit plateau and set off to explore the Cathedral rocks.

Trip leader Robert Hawes

We split up into two groups and clambered up to just beneath the jagged, ice encrusted Cathedral rocks. From there we could see the tiny black figures of other climbers on various peaks. There was also a great crowd of people forming on Pare. We checked out the South face of Te Heu Heu which we were to climb the next day. It looked pretty impressive from where we were standing. Then we headed back down towards the hut.

Being a roasting hot day, we were sweltering by the time we got back to the hut. The hut was packed and everyone there seemed to have had a wonderful day that day. Then we all got to bed early in order to make the most of the following day. Rongo decided to camp out at the Cathedral rocks, so after dinner he went up and spent the night in a snow cave up there.

Sunday

We got up early and got ready for our attempt of Te Heu Heu. We set off up towards the Plateau bright and early. Crossing the white expanse of the plateau the weather was perfectly clear again, and we headed up towards the bottom of the climb. At this point it was time to get serious. We made sure we had our gear and everything that we would need for the climb. We climbed up to where it started to get quite steep and more exposed, and we put our first anchors in. The snow was quite hard so we put in snow stakes. I was climbing with Reece, and he set off to lead the next pitch. He climbed up then started work on the next anchor, as I belayed. Lorraine and Rob were climbing beside us. I started climbing up next, and I found I did need two tools to get up. I got up to Reece and we sorted ourselves out, I started belaying again, and he started climbing again. He got to the top, just before the end of the 60m rope, which was fortunate! I climbed up, and stopped a couple of times, just to admire the beauty of the scenery, and the thrill of the height around us.

Jane climbing Te Heu Heu

From where we were you could see Girdlestone and the Eastern side of the mountain, and Whangehu hut as a tiny dot at the end of the glacier, far below. The snow steepened towards the end, and I climbed up to the top. It was fantastic! Rongo and

Glen were fast climbers and had gotten to the top first. We met Julie and Steve at the top-they had come up an alternative way. Julie won the stoicism award for going up Te Heu Heu despite a nasty cold (I think I might have been tempted to stay in bed). From the top of Te Heu Heu (2732m) we had a beautiful view of the surrounding areas, towns, rivers, lakes and all the other Mountain ranges covered in snow.

Lorraine on Te Heu Heu

Thanks very much to Rob Hawes for organising the trip so well and managing the group dynamics well. Thanks also to the weather gods and goddesses for giving us a big high the whole weekend. All in all it was a fantastic and thoroughly successful trip!

By Jane Dudley

Party: Robert Hawes (Leader), Julie Olds, Jane Dudley, Lorraine Johns, Mike Phethean, Glen Werner, Reece Guersen, Rongo Jeram Patel.

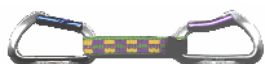

UPCOMING CLUB TRIPS

Wellington Section Trips

Trips are a key part of the Wellington Section. Trips can be of any length, any level of difficulty, and any size. Simply email us or approach us at the monthly meeting, and we can help you get going. Send your trip ideas, no matter how vague, to trips@nzalpine.wellington.net.nz

AIC Expedition - Northern South Island

Date: 18 – 21 September 2009

Leader: TBA

Level: AIC Graduate and 0 - 3 years experience (AIC grads first preference, all welcome)

The destination is to be set by the AIC group, as part of the planning exercise. It is a 'mystery trip'. Come and join the AIC graduates and welcome them to the world of mountaineering. This could even be a good chance to discover a new climbing buddy!

Contact Don French, ph 06 377 7117 (h) or by email df@nzalpine.wellington.net.nz

Arapiles, Victoria, Australia

Date: 22 – 27 October 2009

Leader: TBA

Level: Rock grade 1 - 33, 4000+ routes, most multi-pitch, 99% trad climbing

The Arapiles is a legendary area for rock climbing in Australia. All trad, with a huge number and range of routes, there will be something for everyone on this trip. From three starred multipitch grade 5 climbs (yes, grade 5), through to bonkers grade 30+ routes with minimal pro, the Arapiles has it all. If you're interested in finding out more about the Arapiles area check the following website: www.chockstone.org

The plan is to fly over on Thursday to Melbourne, pickup a cheap rental and drive (4h) to the Arapiles for 4-5 days (Fri-Tues) of trad climbing on the best rock in the planet. Climb classics like Muldoon and The Bard. Flying back to Wellington on Tuesday afternoon/evening. Do NOT miss this opportunity to climb on solid, red, metamorphised sandstone.

Contact Kevin at 934 0975 (evenings) or by email kp@nzalpine.wellington.net.nz

Centennial

Date: 20 – 29 November 2009

Leader: TBA

Level: AIC Graduate and 0 - 3 years experience

Trip involves travelling to Franz Josef and then choppering into Centennial Hut for a week of climbing. There are a number of alpine climbing options including The Minarets, De La Beche. For those who like cross-country skiing the Centennial – Pioneer Huts traverse is a must! If you want to try some quality rock the pioneer Range is not far away, and there are multi-pitch classics such as Moonshine Butress (crux 17) nearby as well. Contact Kevin at 934 0975 (evenings) or email me at kp@nzalpine.wellington.net.nz

Centennial Hut on the Franz Josef neve

Annual NZAC Climbing Camp, Matukituki Valley

Date: 2 – 9 January 2010

This years Climbing Camp will be in the Matukituki Valley adjacent to Aspiring Hut, from Saturday 2nd January to Saturday 9th January 2010. It will be hosted by the Otago Section and is a fantastic opportunity for climbers and their families to gather in the mountains for climbing, tramping and generally have fun. There is some fantastic climbing in the area; from the easy peaks of Tyndal and Ansted above Cascade saddle to the many climbs accessible from Colin Todd and French Ridge huts, including Mt Aspiring, Mt French and Mt Avalanche.

See NZAC website for details <http://alpineclub.org.nz/default/377>). Contact Kevin at 934 0975 (evenings) or email me at kp@nzalpine.wellington.net.nz for carpooling arrangements.

Paynes Ford / Pohara

Date: 22 – 25 January 2010

Leader: TBA

Level: Rock grade 15-30

Come spend the long anniversary weekend in 'hippie-ville'. Golden Bay hosts two of the finest limestone crags with long mid-range routes at Pohara and hard classics at Paynes Ford. There is something here for everyone including beaches with white hot sand at Pohara and extensive cool swimming holes adjacent to the Hang Dog campground at Paynes. Relax afterwards with a meal of Mussels and Guinness while watching the cricket at the Pohara Pub. Contact Kevin at 934 0975 (evenings) or email me at kp@nzalpine.wellington.net.nz

NOTICES

THE TOUR backcountry ski touring teams race

THE TOUR, a 2 day, backcountry ski touring teams race, based out of Cheeseman Ski Area is set to be the high light of the 2009 Ski Mountaineering New Zealand (SkiMoNZ) race calendar.

THE TOUR will take place on the 19th and 20th of September 2009 and follow a similar format to some of the biggest ski mountaineering races in Europe, like the TSF and Pierra Menta. Teams of 2 will travel together, following an established course; the team with the lowest accumulated time at the end of the 2nd day will be crowned the overall winner.

Conditions permitting, each day THE TOUR will be made up of at least 1300 vertical meters of ascent and descent. Entry for THE TOUR will open around early July and be limited to only 25 teams. E-mail info@thetournz.com

Lost & Found

Found – ice screw

An ice screw (number 13) was found on Sunday 9 August on Ruapehu below the Chiming Bells route. Please contact Jane DeVille on 021 766 120.

Found – ice axe

A Black Diamond Arclight Blue axe with a purple wrist strap was found on the slope of Mt Taranaka on the 12th August. Please contact David Kirby at dave.k@paradise.net.nz

Free access to DOC's track information

DOC now provides detailed track information to the public.

In recent months, DOC has received increasing requests from the public to download DOC spatial information to their personal GPS, to see where our tracks are on public conservation lands and to view these on Google Earth and Virtual Earth, in order to be able to plan tramps and compare data. As a result, DOC tracks are now available for the public to download, via the Koordinates website <http://koordinates.com/layer/753-doc-tracks-may-2009>. This new information is already improving visitor/tramping opportunities and continues to engage the public further in conservation.

This data has been collected by DOC staff using DOC systems, in conjunction with other

national data sources and it marks a big step in the sharing and promotion of DOCs spatial information, at no charge to the consumer. The application of this data extends beyond tramp information, ranging from cartographers creating atlases, to supermarkets wanting to calculate their national carbon footprint.

Improving access to the Governments spatial information is a goal of the NZ Geospatial Strategy and DOC is taking a lead on this. The mission is to provide online, free and unrestricted access to environmental data and information, thus building trust, transparency and collaboration.

How was the track information compiled?

This track information has generally been captured by field staff on their GPSs then handed over to Conservancy Information Management Unit (IMU) staff who quality assure (QA) it against other datasets like topo maps and aerial photography and maintain it in a national dataset.

Conservancy IMU staff have also worked with Area Offices and Land Information New Zealand (LINZ) to supply tracks for the new 1:50,000 topographical map series (Topo50) coming out next month to replace the existing NZMS 260 series.

With any data there are risks and limitations and its fitness for purpose. Some of this data is captured off a 1:250,000 map so is not suitable to load onto your GPS and navigate a narrow ridge during a white out. There is an accuracy attribute and disclaimer but DOC can take steps to reduce risk through user education and maintenance of our data.

What is the difference between Topo50 tracks and DOC tracks?

Topo50 is a cartographic product that has been generalised for a 1:50,000 scale and contains tracks managed by councils and tramping clubs in addition to tracks on DOC land. DOC tracks have been captured for asset management purposes initially, and are as accurate as practical.

Why are huts in AMIS, but we have to capture tracks and roads separately?

Asset Management Information System (AMIS) captures point features such as huts or points along a track. Someone has to fill the lines between these points, which is where the expertise of the field staff and their GPSs and the QA from IMU staff come into play.

How can I improve the track data for my patch?

Get out your GPS and go see your Conservancy IMU staff, especially if there has been a change to the track that they might not know about.

Photo Competition Awards

Our most grateful thanks to sculptor Andrew Lyons and Club members Paul Corwin and Sally Widdowson for donating a new Photo Competition award. The carving (pictured) of our native Kea was sculpted to replace the long-lost Dorflinger Award and is aptly named in memory of Erica Beuzenberg who had an interest in nature photography. While winners' names will be engraved on the award, it has been decided to retain this and other Photo Competition awards on permanent display in our National Reference Library.

This now leaves us only one award/trophy short, a replacement for the missing Guide Alack Challenge Cup. This award is for the most outstanding mountaineering photograph as judged by a mountaineer. It would be an opportune time to have an award named after Sir Edmund Hillary perhaps? Something to consider and if you would like to donate an award to fill this position, or perhaps sponsor one, please contact Margaret (Margaret@alpineclub.org.nz) at the National Office and let her know.
